Valves for the Power Industry
Critical Service Solutions
Critical Service Valve Applications

ValvTechnologies’ valves are built to withstand the most severe applications. High-temperature, high-pressure, high-cycling, abrasive, corrosive and caustic media have all been considered in the design of our product line.

**LP Feedwater System**
- Feed water inlet isolation
- Feed water outlet isolation
- Bypass isolation
- Shell side vents
- Shell side drains
- Level control isolation
- Manual dump to condenser
- Shell side instrument isolation
- Instrument isolation

**HP Feedwater System**
- BFP recirc isolation
- BFP discharge isolation
- BFP turbine above and below seat drains
- Feedwater heater isolation inlet and outlet
- Feedwater heater bypass
- Shell side water level control isolation/heater drain
- Feed water drains
- Shell side drains and vents
- Instrument isolation

**Sootblower System**
- Sootblower header isolation
- Sootblower control valve isolation
- Sootblower control valve downstream block
- Sootblower header crossover isolation
- Individual sootblower isolation
- Sootblower drains
- Instrumentation

**Hot and Cold Reheat Steam Lines**
- Drains and vents

**Boiler System**
- Economizer drains and vents
- Water wall header drains and vents
- Mud drum blowdown
- Steam drum gauge/sight glass isolation
- Start-up, drum level control
- Steam drum continuous blowdown and block
- Steam drum instrument isolation
- Secondary superheater header drains and vents
- Secondary superheater instrument isolation
- Primary superheater header drains and vents
- Primary superheater instrument isolation
- Reheat superheater header drains and vents
- Reheat superheater instrument isolation
- Reheat spray isolation
- Electronic relief valve and isolation

**Turbine Steam and Extraction System**
- Main steam drains
- Main steam stop before and after seat drains
- Main steam turbine isolation, double block and bleed
- Main steam attemperator/superheat/reheat spray isolation
- HP turbine bypass
- Turbine drains
- Extraction steam isolation
- Extraction steam drain valves

**Combined Cycle/Co-Generation**
- BFP recirc
- BFP recirc isolation
- HP economizer drains/vents
- IP economizer drains/vents
- LP steam drains/vents
- HP/IP drum pressure and level transmitter instrumentation
- Saturated steam isolation
- Steam drum gauge/sight glass isolation
- Superheater drains/vents
- Hot reheater and main steam isolation drains, vents
- Electronic relief valve
- Main steam start-up vent
- Main steam attemperator/superheat spray isolation
- Turbine bypass system
- Fuel gas heat exchanger
- Instrument isolation
- Emergency gas valve isolation
V Series Metal Seated Ball Valves.
The flagship of the ValvTechnologies’ product line

1 Integral metal seat.
With our patented HVOF RiTech® coating technology, the integral seat in ValvTechnologies’ valves is resistant to the attack of abrasive and corrosive production applications.

2 Body seal ring.
ValvTechnologies employs a field proven seal ring technology to ensure sealing under all operating conditions, up to 1400°F. The body seal ring is loaded at a pressure higher than 20,000 psi. In addition, valves sized 3” and above contain a secondary Grafoil® seal to further guarantee reliability.

3 Patented coating process.
The sealing surfaces are overlaid with tungsten or chromium carbide using our HVOF RiTech® coating process. These surfaces have a hardness of 68 - 72 Rc to provide uninterrupted operation in the most severe conditions with zero-leakage.

4 Live-loaded gland area.
The V Series’ sealing design features a four stud, live-loaded assembly designed for heavy industrial applications. The sealing material is high purity Grafoil® surrounded by stainless steel wire mesh anti-extrusion rings. The six Belleville® springs (per stud) provide constant load pressure through extreme thermal shocks and prevent wear leaks in high-cycle service.

5 Blow-out proof stem.
ValvTechnologies’ design utilizes a one-piece, hard-coated, blow-out proof stem that is inserted through the inside of the body cavity eliminating the possibility of blow-out through the gland area. There are no pins, collars or other devices used to retain the stem in the valve body.
## V Series Key Performance Features and Benefits

V Series Products

V1-1 - 3/8” Bore
Compact, light-weight design
- ¼ – ¾” (3/8” bore)
- ANSI/ASME Class 900 - 4500

V1-1
Forged, high-pressure valves
Four-year, zero-leakage guarantee*
- 1/4 - 4”
- ANSI/ASME Class 900 - 4500

V1-2
Flanged, low-pressure valves
- 1/2 - 36”
- ANSI/ASME Class 150 - 600

V1-3
Small bore, low and intermediate pressure investment cast valves
Four-year, zero-leakage guarantee*
- 1/2 - 2”
- ANSI/ASME 150 - 600

V1-4
Large bore, high-pressure valves
- 4 - 36”
- ANSI/ASME Class 900 - 4500

*Four-year warranty in steam and water applications
Receive in-line valve repairability in large-diameter, high-energy piping systems with the ValvTechnologies’ IsoTech®. Proven precisely right for steam and feedwater applications, the IsoTech® offers our rigorous four-year guarantee, in steam and water applications, against leakage and low-cost maintainability.

**Bonnet Area**
- Sufficient mechanical bolting to ensure the seal does not relax during periods when the system is not pressurized
- High seal reliability
- The bonnet does not have to be forced into the valve bonnet throat to allow for the segment rings to be removed

**Disc and Seat Area**
- Discs and seats have been overlaid with the same carbide overlay (68-72 RC) as its counterpart, the ValvTechnologies’ metal-seated ball valve
- Seats are several magnitudes harder than Stellite VI, typically (34-38 RC)
- Lapped to achieve a bubble-tight seal under all pressure conditions, including vacuum
- The large spring load ensures a high initial seal, and the line pressure increases the sealing

**Gland Area Packing**
- The stem and gland are hard faced and polished
- The packing has 316SS woven wire mesh anti-extrusion rings top and bottom and Grafoil® center ring
- Proven, superior, multiple Belleville® spring stacks
- Live-loaded stuffing box

**Back Seat Area**
- The back seat is coated with chrome carbide (typical hardness 68-72 RC) and polished to achieve a bubble-tight seal

**Zero-Leakage Valve Solutions**

---
The ERV package combines ValvTechnologies’ zero-leakage isolation valve with electronic controls to monitor and regulate system pressure. Whether in a capacity relieving function requiring the ASME V-stamp or simply in an over pressure protection application, the ERV provides reliable protection for standard safety valves in many industries.

**Features**
- Repeatable tight shut-off, high precision reliability
- Zero-leakage guarantee comes standard
- The optional integrated isolation valve eliminates the need for a costly field weld
- Specially engineered for easy adaptation to existing control suites

**Actuator Options**
- Pneumatic actuation is customary to the ERV
- Multiple actuator relief options – air, spring, hydraulic, AC/DC electric, failsafe and failsafe last position – extend applicability throughout plant or site

**ERV Control Box**
ValvTechnologies’ new compact, lightweight control box operates in much the same way as the old but integrates many improvements including better environmental performance, simplified wiring and control, set point programmability and fault indication.

**Standard ERV Package Valve**
- Designed to exhaust to atmosphere or into a closed system (superheater bypass)
- Flexibility with both manual and automatic pressure relief of a pressurized system
- Available with complete controls or can utilize existing controls
Xactrol® Control Valves
Tight Shut-off, High-pressure Let-down

From simple, minimum or normal flow control to a full rangeability over a wide range of pressure drops and conditions, we have the solution for you. The Xactrol® Mark I is designed for minimum or normal flow control conditions as required in a large number of flow control applications. In addition to normal flow control the Mark II design has a second flow port which is designed to handle continuous flow conditions. For applications where high-pressure drops are required, the Mark III design comes with a series of upstream pressure reducing plates to meet the toughest of applications.

Features
- Tight shut-off, high-pressure let-down combination
- MSS-SP-61 or better
- Reduces velocity
- Liquids - eliminates cavitation and flashing
- Gases - eliminates erosion and vibration/noise
- Smaller envelope than comparable globe valve
- Higher Cv than comparable globe valve

Control Options
- Mark I - high-pressure and/or erosive service
- Mark II - high-pressure and/or erosive service with the addition of a required continuous minimum flow
- Mark III - high ΔP liquid applications where cavitation and flashing are a concern, high ΔP gaseous applications where fluid is flowing at sonic velocity
Pre-engineered package includes:
- 1/2 - 4” metal seated V1-1 ball valve
- Socket weld and butt weld end connections
- A105, F22, F91 body materials
- ANSI/ASME Class 900 - 4500 pressure classes
- Valve operating conditions to 1400°F (760°C)
- High-cycle pneumatic rack and pinion actuator
- High-cycle mounting hardware
- Limit switch with position indicator - 2-SPDT, quick set cam, IP67, NEMA 4/4X
- NAMUR solenoid - 110V/120V, 230V, 24VDC coils
- Filter/regulator with gauge
- Retainer prevents stem driving into ball

ValvXpress® Actuator
The actuators utilize a rack and pinion design which provides constant torque output in a compact package. The torque output is proportional to the air supply pressure. Twin horizontally opposed cylinders incorporate piston guides to ensure engagement between the rack and pinion.
- Hard anodized body with high-temperature Viton® seals
- Maximum working pressure 142 psi/10 bar
- Maximum working temperature 320°F/160°C

Keep gas turbine and heat recovery system generators (HRSG) online in the event of a steam turbine trip with ValvTechnologies’ TBS. Purposefully designed for the new generation of combined-cycle power plants, our TBS combines the proven Xactrol® severe service control valve design with a state-of-the-art de-superheating control system.

Rhinoite® Hardfacing

Provides bottom-line cost savings

The Rhinoite® process uses a specially formulated tungsten carbide pellet made to a predetermined chemistry. It is applied by a patented metal inert gas (MIG) welding process onto a large variety of base metals using various types of weld wires. The process is a two layer application.

The process can be adapted to all service environments, in any wear application: erosion, corrosion, adhesion and high-temperature applications (2200°F). Rhinoite® hardfacing has been a proven leader of hard metal overlay on elbows, t-sections and choke tubes in chemical plants and refineries for a decade with zero failures. The Rhinoite® hardfacing weld process focuses on minimizing loss of production time by wearing five to seven times longer than bare metal. Rhinoite® hardfacing overlays can be completely refurbished after years of service, reducing overall material and maintenance costs.
ValvPerformance Testing™

Cycle isolation eliminates energy losses attributable to poorly performing or leaking steam, water cycle isolation valves

ValvTechnologies encourages end users to apply the principles of asset management to their installed valve population. The ValvPerformance Testing™ program, or cycle isolation measurement, utilizes next generation acoustic monitoring instruments to help customers monitor valve performance. These tools allow predictive and preventative maintenance programs to be fine tuned for very large or very small valve populations. Providing cycle isolation services can be as simple as performing a valve survey, or as comprehensive as the management of all valve work during your next outage - from erecting scaffolds to repairing, installing, welding and stress relieving.

Program highlights:
- 1-4% in plant system efficiency increase
- Verifiable and quantifiable leakage results.
- Best-in-class valve leakage diagnostics
- Predictive maintenance savings vs. scheduled maintenance activities
- Overall reduction in maintenance costs
- Target only high-value, fast-payback repairs and replacements
- Ease of execution
- Fast results with minimum effort
- Non-intrusive to plant operations
ValvTechnologies, Inc. is a global leader in the design and manufacturing of flow control devices. Founded in 1987 and headquartered in Houston, Texas, ValvTechnologies remains focused on helping customers meet their daily production and process challenges safely and efficiently.

Having built a global reputation for superior quality and dependability across multiple industries, ValvTechnologies’ products are designed to exceed both the standard and most sophisticated, severe-service processes application requirements. ValvTechnologies meets the demands for total flow control solutions, whether one valve at a time, or system-wide.

Bringing together the best people and the latest in technological design and manufacturing processes, ValvTechnologies has created an atmosphere where quality and dependability are built into every product, start to finish.
