

## **Rhinoite®**

# **Titanium Carbide Hard facing Weld Overlay**

The Rhinoite® process is an innovative, patented hard facing process that utilizes state of the art equipment — producing extraordinary results.

#### What is Rhinoite<sup>®</sup>?

Rhinoite is a specialty formulated and patented hard facing overlay that is applied to a variety of base metals using an automatic GMAW process. The weld overlay is embedded with hard particles of carbide that can be diamond ground to a desired dimension or left in as-welded condition depending on the application.

#### Who are the customers?

Chemical plants, refineries, power plants, mining operations.....any industrial operation.

### Where is Rhinoite<sup>®</sup> used?

Any piping system or mechanical handling equipment where wear is a problem.

### What applications can use Rhinoite®?

Application opportunities are limitless as this time. The process can be adapted to all service environments in every wear application: erosion, corrosion, adhesion, and high-temperature applications. Rhinoite® can be applied to various valve components as well as inside of pipe fittings (elbows, t-sections, etc.) of multiple base materials: carbon steel, stainless steel, duplex steel, and Inconel.

For more information, contact sales@valv.com

#### What are the benefits?

- Minimizes loss of production time by wearing five to seven times longer in service operations than bare metal
- Reduces the number of shutdown times to years rather than months
- Eliminates equipment rentals, insulation replacement, and inspection frequency
- · Reduces required man-hours for overall maintenance of units
- Improved safety by reducing the risk of equipment failure
